

MAINPEX slide seal system

Double profile

With the first double groove the support sleeve is protected against mechanical damages.

Undercut

Due to the special design of the fittings, any contact between aluminum layer and the fitting body is prevented.

Fixation of the sleeve

The sleeve is equipped with an additional groove. The material flows in and prevents that the sleeve loses its position.

Higher flow

By expanding the MAINPEX pipe, the cross-section in the joint is substantially larger compared to traditional joint systems.

Sleeve can be used on both sides

The sleeve can be mounted in any direction, improper attachment is impossible.

Dimension 16-50

- 16 x 2,2
- 20 x 2,8
- 25 x 3,5
- 32 x 4,4
- 40 x 4,0
- 50 x 4,5
